

# Full Stack Engineer

## Seeking Full Stack Engineer

BlastWave™ is an inclusive, funded startup with a small team, looking for a few more strong programmers and engineers: people who can write, code, architect, and work collaboratively with other great engineers. We are passionate about solving problems including data security and privacy.

Our Full Stack Engineer will develop the web applications of our products, working with the rest of our development team. She or he will be an expert in one or more UI frameworks and back-end programming language, with the ability to understand the problem domain and, cooperating with the whole team, create elegant solutions.

## Why You'll Love Working at BlastWave

We are transforming people's lives by solving one of the hardest, most important problems of our age: cyber attacks. At BlastWave, we will replace fear and exposure with trust and privacy. We are building a secure full stack solution that protects privacy and connected devices. Our solutions eliminate cyber attack surfaces and thereby rebuild confidence in our critical infrastructure. Our mission is security by design.

We have created a stimulating, collaborative, and fun work environment, where everyone can participate fully. We can't wait to see our colleagues in the morning and share ideas about new ways to create and deliver breakthrough products and technologies. Working at BlastWave requires adaptability, where people remain flexible and can deal with the dynamic nature of working at a startup with high aspirations. We promote opportunities for personal and professional growth when we can find them, and this is an important part of our office culture.

At BlastWave, we hire and appreciate the whole person. Life can be messy at times. We recognize that there is no one-size-fits-all approach, and see this as an opportunity for creative and better solutions, rather than a hindrance. We want to provide sustainable work life balance by establishing productive relationships and making effective choices. We adapt to different family situations, commute schedules, and other issues in ways that are practical and work for everybody. We strive to take care of our mental and physical health, explore hobbies, and spend time with our friends and families as an essential means of promoting creativity and energized commitment.

## Qualifications

- A Bachelor's or Master's degree in computer science, software engineering, mathematics, or related field; or equivalent experience
- Several years of software development experience implementing UIs
- Experience with graphic designers and converting designs to functioning elements
- Experience in system design, data structure and algorithm development and optimization
- Excellent Coding Skills:
- Proficient with back-end programming languages, e.g., Elm, Python, Ruby, Rust, Node.js
- Proficient with front-end frameworks, e.g., Angular, React, Backbone, JQuery, Knockout
- Familiarity with git and one of gitlab, github, or bitbucket
- Comfortable with Agile and strong Testing methodology
- Strong written and verbal communication and interpersonal skills
- Ability to prioritize activities to deliver projects on time and within budget
- Understanding of computer science concepts

## Desired Skills and Knowledge

Successful candidates will also have abilities in several of the following:

- Python/Ruby or other scripting programming
- GUI, Gaming, or IDE Programming Experience
- Consumer protocols including USB, WiFi, Bluetooth Smart/LE
- Familiarity with public-key and symmetric cryptography
- Mobile development experience
- Functional programming
- Analysis of data using statistics or machine learning to develop novel algorithms.
- Static Analysis or Testing Frameworks

## Full Stack Developer Responsibilities

- Design UI/UX using best practices
- Design and code overall architecture of the application that implements that UI/UX
- Follow and improve coding guidelines, best practices and tools to enhance code quality and maintainability
- Ensure responsiveness of applications
- Collaborate with the rest of the engineering team to design and launch new features
- Prioritize and select appropriate tasks from the issue tracker and finish them in sync with the rest of the team
- Evaluate and integrate software from open source and 3rd party vendors
- Understand and implement standard security and data protection

### How to apply:

- Send cover letter and resume to [careers@blastwaveinc.com](mailto:careers@blastwaveinc.com). No Recruiters, please.
